

Quick Start Guide - n8n Docker Setup

5-Minute Setup

1. Prerequisites Check

```
# Verify your system
lsb_release -a      # Should show Ubuntu 25.04
nvidia-smi          # Should show your RTX 2070
df -h               # Check available disk space
```

2. Install Dependencies

```
cd /DATA/Work/Projects/N8N/compose
./scripts/install-dependencies.sh
```

Note: If Docker was just installed, log out and back in before continuing.

3. Verify Setup

```
./scripts/verify-setup.sh
```

4. Deploy Stack

```
./scripts/deploy.sh
```

5. Access n8n

- **URL:** `https://n8n.localhost`
- **Username:** `admin`
- **Password:** `SecureN8nAdminPass123!` (*change this in .env file*)

6. Add to hosts file (for local access)

```
echo "127.0.0.1 n8n.localhost traefik.localhost" | sudo tee -a /etc/hosts
```

Daily Operations

[View Logs](#)

```
docker compose logs -f n8n          # n8n application logs
docker compose logs -f postgres     # Database logs
docker compose logs -f traefik      # Proxy logs
```

Backup Data

```
./scripts/backup.sh
```

Health Check

```
./scripts/health-check.sh
```

Stop/Start Services

```
docker compose down          # Stop all services
docker compose up -d         # Start all services
docker compose restart n8n   # Restart just n8n
```

🔧 Customization

Change Domain (for production)

1. Edit `.env` file:

```
DOMAIN_NAME=yourdomain.com
N8N_HOST=n8n.yourdomain.com
ACME_EMAIL=admin@yourdomain.com
```

2. Update DNS records to point to your server
3. Redeploy:

```
docker compose down
docker compose up -d
```

Update Passwords

1. Edit `.env` file with new passwords
2. Update database:

```
docker exec -it n8n-postgres psql -U postgres -c "ALTER USER n8n_user
PASSWORD 'new_password';"
```

3. Restart n8n:

```
docker compose restart n8n
```

🔍 Troubleshooting

Common Issues

"Cannot connect to Docker daemon"

```
sudo systemctl start docker
sudo usermod -aG docker $USER
# Log out and back in
```

"Address already in use"

```
sudo netstat -tulpn | grep :80
sudo netstat -tulpn | grep :443
# Stop conflicting services or change ports in docker-compose.yml
```

"n8n not accessible"

```
docker compose ps          # Check service status
docker compose logs n8n    # Check n8n logs
curl -k https://localhost  # Test connectivity
```

Database connection errors

```
docker compose logs postgres # Check database logs
docker exec n8n-postgres psql -U postgres -l # Test database access
```

Get Help

- Check main README.md for detailed troubleshooting
- View logs: `docker compose logs -f`

- Reset everything: `docker compose down -v && docker compose up -d`

📊 Monitoring URLs

- **n8n Interface:** `https://n8n.localhost`
- **Traefik Dashboard:** `http://localhost:8080`
- **PostgreSQL:** Connect via n8n or database client on `localhost:5432`

For complete documentation, see the main [README.md](#) file.
